

Fw: LDR regulatory question

Elaine Eby to: Dave Bartus

History: This message has been replied to.

Hi Dave-

Remember this email you sent me about in-trench macro-encapsulation of debris at Hanford?

We had the conversation with Peggy Vyas and Jim Thompson and concluded that you could not treat in the trench and that there would be no treatment variance options available for allowing this.

We just got a call from Region 6(?) about a guy in Texas that wanted to do macro-encapsulation of mixed debris waste in the landfill (using the same type of thing grouting) and was inquiring about a possible variance...sound familiar? I told Region 6? what we basically concluded for the Hanford situation,,,,,,that there was no type of variance for this and that you have to treat prior to land disposal. Has anything changed on your end? We still good with this?

I will send you the email from the Region.

Thanks.

Dave-

So if it's both new and remediation waste I would say that you can't treat in the trench. Kindof the ssame principle as the mixture rule. Is this response even on point?
Please let me know if you would like to re-convene the group and have another call.
Elaine

Thanks, Elaine. I recalled our earlier conversation, but was unable to find the e-mail, so your re-send is much appreciated and exactly what I was looking for. My apologies for poor recordkeeping...

By way of background, it is entirely possible that the two landfills at the focus of this issue may receive remediation waste. That said, the in-trench treatment issue specifically rears its ugly head with regard to non-remediation waste. Also, the issue is specific to traditional landfills - not staging piles, CAMUs, SIs, etc.

Dave
